

Teacher Review Committee: Review of Field-test Items for the Virginia Alternate Assessment Program (VAAP) Fall 2024

Behavioral Research & Teaching (BRT)
University of Oregon
and the
Virginia Department of Education

Safety Brief

Agenda

- Introductions
- Confidentiality & Non-Disclosure Agreement
- Student Population
- Virginia Essentialized Standards of Learning (VESOL)
- VAAP Assessment Essential Design Components
- Break
- Reviewing VAAP Test Items for Alignment and Quality
- Break
- Distributed Item Review (DIR)
- Questions & Answers
- Looking Ahead: Whole-group Discussion of Review Ratings and Feedback

Goal & Review Tasks

Goal: Review and provide feedback for VAAP field-test items for alignment to VESOL, accuracy, possible bias, accessibility, and appropriateness.

Review Tasks:

1. Whole-group training & item review practice
2. Independent item review ratings & feedback
3. Whole-group discussion of item review ratings & feedback

Introductions

- Name
- Position/role
- Location
- What are you excited and/or nervous about this week?

Confidentiality Agreement & Non-Disclosure Agreement

Student Population —
Students with the Most Significant
Cognitive Disabilities (SWSCD)

SWSCD Population & Diverse Learning Needs

- CJ – verbal, reads, and writes in classroom and during assessment (0:00 to 0:20)
- Taisha – requires reinforcement, verbal/gestural communication/response (0 to 0:38)
- Grant – partially verbal and uses gestural responses (0 to 0:20)
- Chloe – non-verbal, augmented communication, active response (1:45-2:40)
- Austin – non-verbal, augmented communication, non-response common (0 to 0:45)

****Note the diversity in cognitive processing observable these students.****

SWSCD Population — Range of Learner Characteristics

- **Communication difficulties:** Self-determination, behavior, social interactions, & participation in learning environments
- **Learning patterns uneven in all domains:** Cognition—academic, reasoning, communication, socialization, & self-help
- **Multiple disabling conditions paired with intellectual disability & developmental delay:** Physical, gross– and fine-motor, sensory challenges, & medical needs may impact health, stamina, & engagement
- **Individual methods of accessing & relaying information:** Tactile, visual, auditory, & multi-sensory
- **Difficulty learning new tasks, maintaining new skills, and generalizing skills to new settings:** Learning and application processes are difficult to master

SWSCD Population — Range of Adaptive Behavior Impairments in 3 Domains

- **Conceptual (academic) Skills:** Language, reading, writing, number concepts, critical thinking
- **Social Skills:** Interpersonal skills, social responsibility, self-esteem, gullibility, naïveté, follows rules/obeys laws, avoids being victimized, social problem solving
- **Practical Skills:** Activities of daily living (personal care), occupational skills, telling time, using money, safety, health care, travel/transportation, schedules/routines, using computer/phone

SWSCD Population — Range of Intellectual Functioning

Students show wide range of intellectual disability across SWSCD population:

- Mild — Moderate — Severe — Profound*
- Students in latter three classifications are typically ≥ 3 standard deviations below mean IQ score*
- Students qualify to take alternate assessment, with determination in Virginia made using the VAAP Participation Criteria Tool

Grade-level academic content must be reduced in depth, breadth, and complexity (RDBC) to meet the diverse learning needs of SWSCD.

In Virginia, this process yields the Virginia Essentialized Standards of Learning (VESOL), the foundation of VAAP instruction and assessment for SWSCD.

SWSCD Population — VAAP Testing

- It is essential that the VAAP program works to meet the needs of the *full population of SWSCD*.
- That means, as we review VAAP field-test items over the next few days, we must keep the *full population of SWSCD*, and all the diversity we observe across students, schools, divisions, and regions, in mind.

Virginia Essentialized Standards of Learning (VESOL)

VESOL Essentialization Process

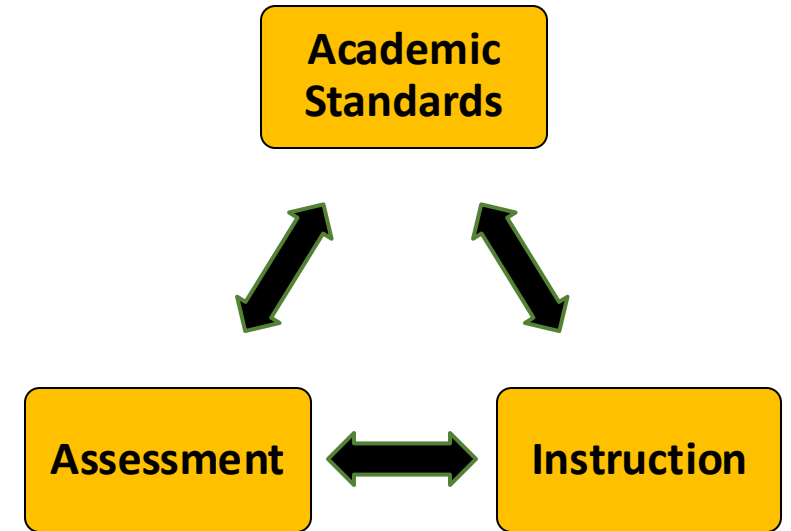

Who and What:

- Developed by VDOE + BRT/UO + Virginia Educators
- Reading, Mathematics, & Science

General Process:

- Identify big idea of a given SOL
- Identify behaviors that are accessible and appropriate/relevant for SWSCD
- Reduce depth, breadth, & complexity (RDBC) of content & performance expectations
- Format standards into recall/recognition/identification (depth of knowledge)
- Eliminate superfluous text and details unrelated to target knowledge/skill
- Elaborate across a reasonable continuum of complexity

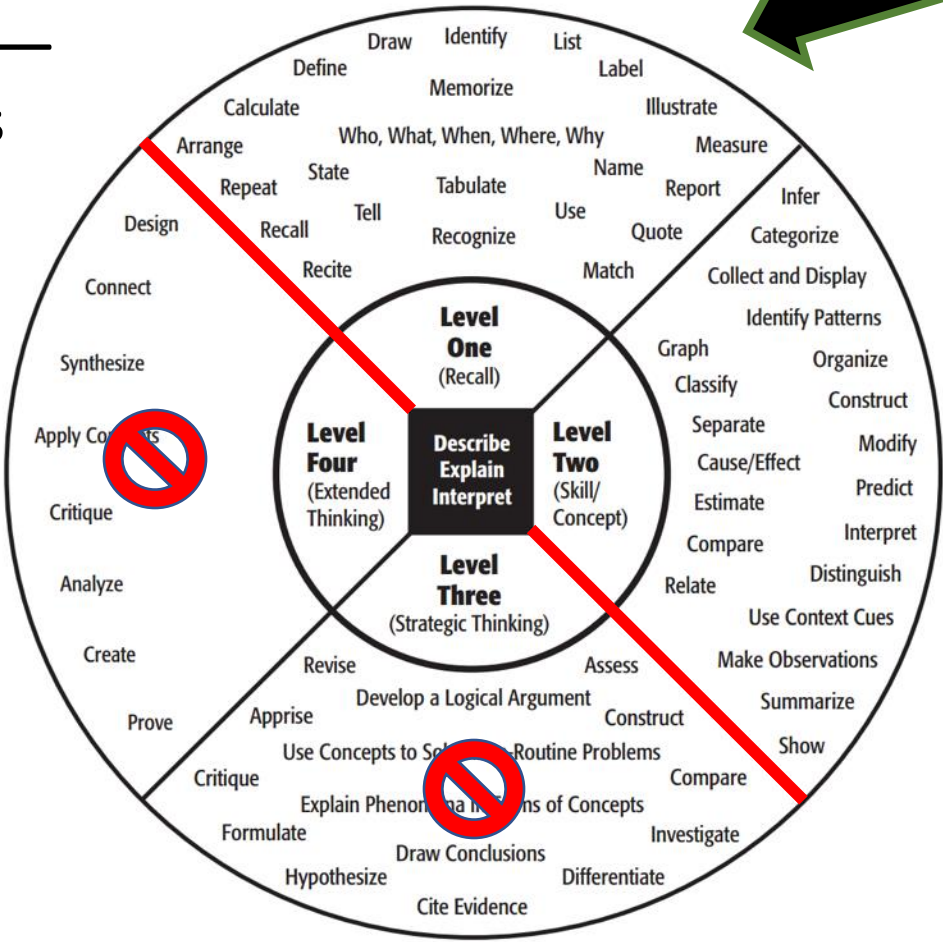

Key Outcome: VESOL = Knowledge/skills that SWSCD in VA should demonstrate proficiency toward

Ranges in Cognitive Processing

Webb's Depth of Knowledge —
Hierarchy of Processing Verbs

Level 4:
Extended
Thinking

Level 1: Recall
(recognize, identify,
calculate, define, match)

VAAP content and
performance expectations
primarily target Level 1
(sometimes Level 2)

Level 2: Apply
(categorize,
estimate, predict,
organize, graph,
distinguish)

Level 3: Strategic Thinking

Example from Grade 3 - Mathematics

SOL

3.3a: The student will estimate and determine the sum or difference of two whole numbers.

RDBC

VESOL

M-3.5: Add and subtract whole numbers from 0 through 20.

Complexity continuum: Sums for addition problems will not exceed 20.

(DOK level 1 – calculate)

Example from Grade 5 - Reading

SOL

5.5A: Summarize plot events using details from text.

5.5B: Discuss the impact of setting on plot development.

5.5C: Describe character development.

5.5E: Explain the resolution of conflict(s).

RDBC

VESOL

R-5.5: Identify a character, setting, or event in a story read to student.

Complexity continuum: The story including a character, setting, or event could range from a sentence with six or fewer words to two sentences with five to seven words or a short paragraph.

(DOK level 1 – identify)

Example from High School - Science

SOL

BIO.2: The student will investigate and understand that chemical and biochemical processes are essential for life. Key ideas include a) water chemistry has an influence on life processes; b) macromolecules have roles in maintaining life processes; c) enzymes have a role in biochemical processes; d) protein synthesis is the process of forming proteins which influences inheritance and evolution; and e) the processes of photosynthesis and respiration include the capture, storage, transformation, and flow of energy.

RDBC

VESOL

S-HS.2: Recognize that plants need light, air, and water to grow and create energy through photosynthesis.

Complexity continuum: Using simple pictures, diagrams, or representations, concepts could range from:

- recognizing the difference between light, air, and water and that plants need them to survive and grow to
- recognizing the term and role of photosynthesis and characterizing or comparing the growth of a plant, tree, or flower when different amounts of light, air, or water are provided to
- recognizing plant parts associated with the basic inputs (water, sunlight, carbon dioxide) and outputs (oxygen, sugar) of photosynthesis (e.g., roots take in water during photosynthesis, leaves take in sunlight during photosynthesis, leaves release oxygen during photosynthesis).

(DOK level 1 – recognize)

VAAP Assessment

Essential Design Components

VAAP Assessment Essential Design Components

- Meets requirements of Federal Peer Review
- Allows for variability and diversity in SWSCD population
- Incorporates positive components of portfolio VAAP (i.e., proficiency levels)
- Links sufficiently to academic instruction based on SOL content that is RDBC
- Aligns sufficiently with VESOL
- Changes nimbly as SOL change
- Involves Virginia educators in development and validation
- Incorporates accommodations & curricular supports for students and teachers
- Scores and reports via Pearson system & matches reporting timelines

VAAP Assessment Essential Design Components

Reading, Mathematics, and Science assessments are composed of test items with 3 answer options delivered in:

- Online administration
- Paper administration

VAAP Assessment Essential Design Components

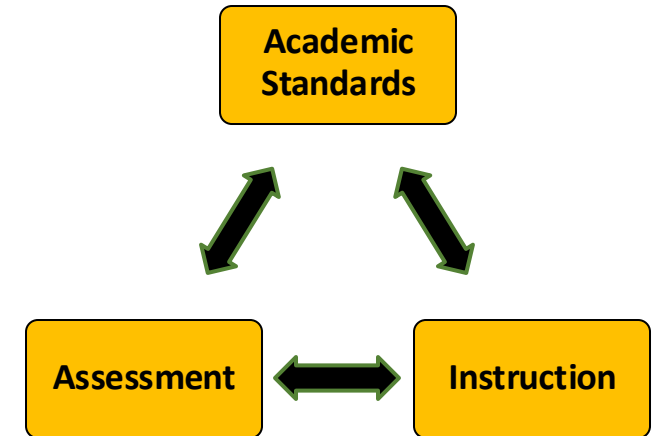

Offers multiple and diverse ways for students to respond:

- Students may enter answer selections on computer and/or paper
- Students may enter answer selections with the support of assistive technology
- Teachers and/or examiners may enter answers selected by students based on their preferred response modality (see IEP), for example:
 - Verbal response
 - Pointing
 - Head Movement
 - Eye gaze

But...how do students' *cognitive processing*, *VESOL essentialization*, and *assessment essential design components* impact the development of VAAP test items?

Academic Content & Performance Expectations — Alignment of Standards, Instruction, & Assessments

- VAAP test items should help show whether students have learned the academic content, and instruction should help make sure they learn it
- Therefore, VESOL, instruction, & assessments, should be **sufficiently aligned**, working together and reinforcing one another, so that we can make decisions about what SWSCD know and can do

Therefore, VAAP test items must be **accessible, appropriate/relevant, & free of bias** in ways that:

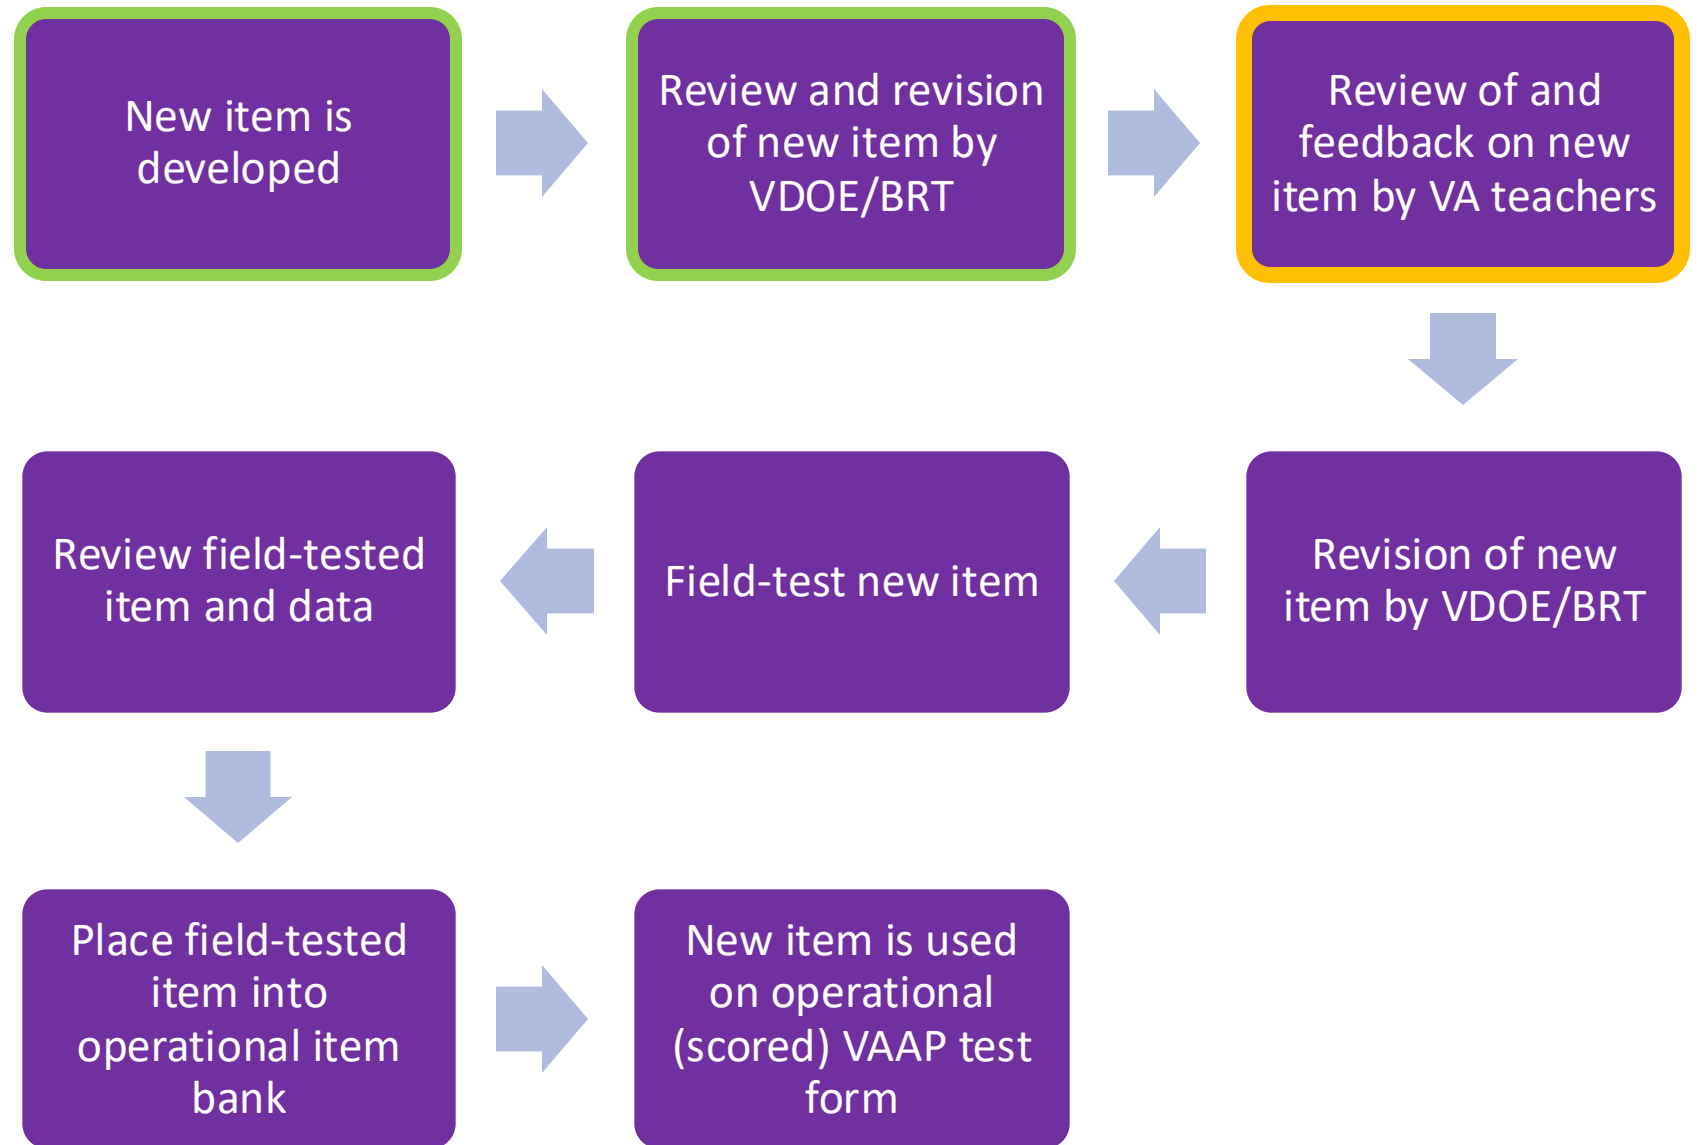

- Reflect the range/diversity in cognitive processing we observe in SWSCD, and
- Sufficiently align with the academic content and performance expectations detailed in the VESOL.

This is true for classroom instruction, too.

BREAK TIME

Reviewing VAAP Test Items for Alignment to VESOL and Important Dimensions of Quality: Examples & Practice

Overview: Life Cycle of VAAP Test Item

Overview: Reviewing VAAP Test Items

- Key claims:
 - The academic content in VAAP test items should be **sufficiently aligned** with the academic content and performance expectations in the VESOL.
 - All components of VAAP test items (e.g., text, grammar, graphics) should be **accurate, free of bias**, and **accessible** for SWSCD.
- Key question: Does each test item you review **measure the academic content and performance expectations** expressed in the VESOL?*

Overview: Reviewing VAAP Test Items

Review task: Use your expertise and experience to make sound judgments about the alignment and quality of VAAP test items gathered from **4 yes/no questions** and **1 open-ended text box** using a secure, online review system called the Distributed Item Review (DIR):

1. Is the item sufficiently aligned to the target VESOL? ☐ **Yes** ☐ **No**
2. Are all aspects of the item accurate? (e.g., correct answer coded — grammar, punctuation, spelling — clear and direct language — match between examiner/student materials, including graphics) ☐ **Yes** ☐ **No**
3. Is the item free of bias and any accessibility concerns? (e.g., for visually impaired (VI) students — avoids slang/colloquialisms — for protected groups of people) ☐ **Yes** ☐ **No**
4. If present, are graphics accessible, appropriate, and accurate? (e.g., consistent size, free of distracting/unnecessary details) ☐ **Yes** ☐ **No**
5. If you answered “No” to any of the above questions, or you have any suggestions to improve the item, please succinctly recommend any edits. **Textbox**

Alignment to VESOL

Level 1: Recall
(recognize, identify, calculate,
define, match)

Level 2: Apply
(categorize, estimate,
predict, organize, graph,
distinguish)

1. Is the item sufficiently aligned to the target VESOL? ☒ Yes ☐ No

Yes = Sufficiently Aligned: **Close match** between test item content and performance expectations expressed in the VESOL and complexity continuum that allows students to demonstrate performance expectations (i.e., item is “spot on”, with **no improvements needed**).

No = Insufficiently Aligned: **Mismatch** between test item and VESOL content and performance expectations (i.e., item and VESOL are simply not the same, and **some improvement is needed**).

Sufficiently Aligned

Yes = Sufficiently Aligned: **Close match** between test item content and performance expectations expressed in the VESOL and complexity continuum that allows students to demonstrate performance expectations

Test Item

VESOL

Test item is “spot on”, with **no improvements needed** to strengthen alignment.

Insufficiently Aligned

No = Insufficiently Aligned: **Mismatch** between test item and VESOL content and performance expectations

The test item and VESOL are simply not the same, and **some improvement is needed** to strengthen alignment.

Providing Rationale and Recommendations (Alignment)

5. If you answered “No” to any of the above questions, or you have any suggestions to improve the item, please succinctly recommend any edits. **Textbox**

The recommendations you provide should:

- Focus on alignment of content and performance expectations,
- Be specific, succinct, and constructive, and
- Give actionable guidance for improving test items.

Alignment Examples — Grade 3 Math

M-3.5: Add and subtract whole numbers from 0 through 20.

Complexity continuum: Sums for addition problems will not exceed 20.

$$1 + 4 = ?$$

1

3

5

$$16 + 14 = ?$$

16

30

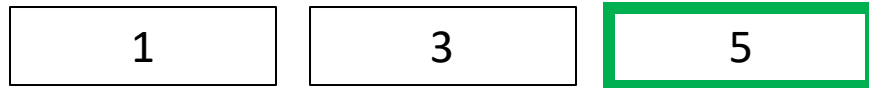

164

Alignment Examples — Grade 3 Math

M-3.5: Add and subtract whole numbers from 0 through 20.

Complexity continuum: Sums for addition problems will not exceed 20.

$$1 + 4 = ?$$

(single-digit #s)

lower

higher

$$16 + 14 = ?$$

(single- and double- digit operands and
double- and triple-digits answers)

Alignment Rating: Yes = Sufficiently
Aligned → content and performance
expectations closely match (all numbers
and sums are within 0-20; addition)

Alignment Rating: No = Insufficiently Aligned →
prompt and two answer options are above 20
Recommendation: To strengthen alignment,
decrease value of out-of-range prompt and
answer options

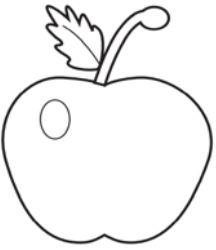

Alignment Examples — Grade 5 Reading

R-5.5: Identify a character, setting, or event in a story read to student.

Complexity continuum: The story including a character, setting, or event could range from a sentence with six or fewer words to two sentences with five to seven words or a short paragraph.

Ben likes to bake bread.

What does Ben like to bake?

		
apple	oven	bread

Gracie told John to clear his plate after dinner.
John left the plate on the table.

Who was mad after John left his plate?

James	John	Gracie
-------	------	--------

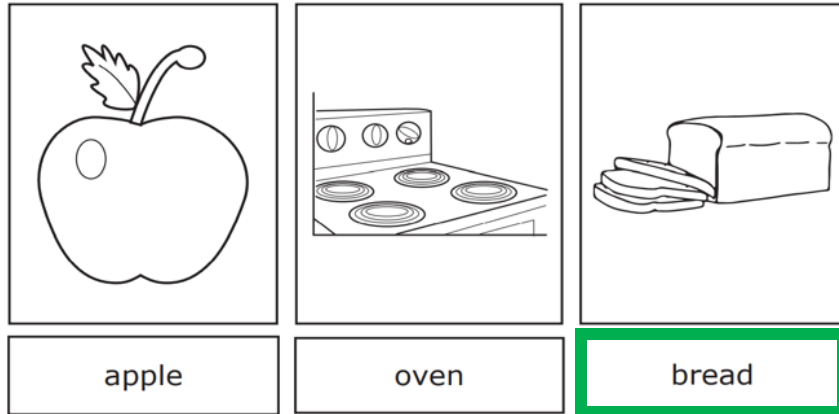

Alignment Examples — Grade 5 Reading

R-5.5: Identify a character, setting, or event in a story read to student.

Complexity continuum: The story including a character, setting, or event could range from a sentence with six or fewer words to two sentences with five to seven words or a short paragraph.

Ben likes to bake bread.

What does Ben like to bake?

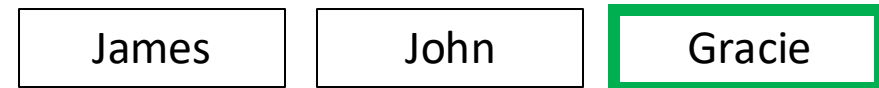

(single, short sentence/story)

lower ←————→ higher

Gracie told John to clear his plate after dinner.
John left his plate on the table and Gracie was mad.

Who was mad after John left his plate?

(two, medium sentences/story)

Alignment Rating: Yes = Sufficiently Aligned → content and performance expectations closely match (identifying event and character in a story)

Alignment Rating: No = Insufficiently Aligned → inference is not in VESOL and leads to unclear correct answer

Recommendation: To strengthen alignment, add concrete detail / remove inference

Alignment Examples — High School Science

S-HS.2: Recognize that plants need light, air, and water to grow and create energy through photosynthesis.

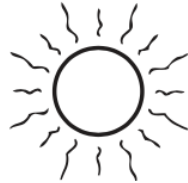

Complexity continuum: Recognizing the difference between light, air, and water and that plants need them to survive and grow to • recognizing the term and role of photosynthesis and characterizing or comparing the growth of a plant, tree, or flower when different amounts of light, air, or water are provided to • recognizing plant parts associated with the basic inputs (water, sunlight, carbon dioxide) and outputs (oxygen, sugar) of photosynthesis (e.g., roots take in water during photosynthesis, leaves take in sunlight during photosynthesis, leaves release oxygen during photosynthesis).

During photosynthesis, plants use
light to make food and grow.
Which gives plants light?

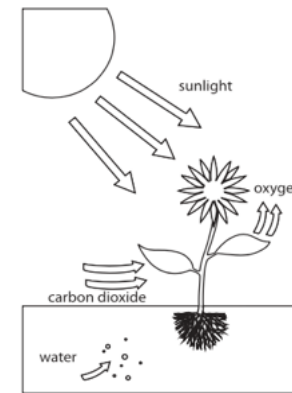

Leaves

Sun

Clouds

Which part of the plant takes in sunlight?

Leaves

Roots

Clouds

Alignment Examples — High School Science

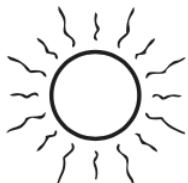

S-HS.2: Recognize that plants need light, air, and water to grow and create energy through photosynthesis.

During photosynthesis, plants use light to make food and grow.
Which gives plants light?

Leaves

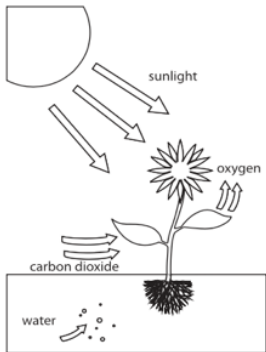

Sun

Clouds

(photosynthesis explained, Sun in prompt, single-concept)

lower

Which part of the plant takes in sunlight during photosynthesis?

Leaves

Roots

Clouds

(multi-concept — parts + function + link to photosynthesis)

higher

Alignment Rating: Yes = Sufficiently Aligned → content and performance expectations closely match (plants; functions; photosynthetic processes)

Alignment Rating: No = Insufficiently Aligned → photosynthesis not mentioned/assessed
Recommendation: To strengthen alignment, consider incorporating the word photosynthesis

Accuracy

2. Are all aspects of the item accurate? (e.g., correct answer coded — grammar, punctuation, spelling — clear and direct language — match between examiner/student materials, including graphics) ☐ **Yes** ☐ **No**

Yes = Accurate: All parts of the test item are **accurate** (i.e., item is “spot on”, with **no improvements needed**).

No = Inaccurate: Some part(s) of the test item are **inaccurate** (i.e., **some improvement is needed**).

Providing Rationale and Recommendations (Accuracy, Bias, Accessibility, & Appropriateness)

5. If you answered “No” to any of the above questions, or you have any suggestions to improve the item, please succinctly recommend any edits.

Textbox

The recommendations you provide should:

- Focus on accuracy, potential bias and accessibility concerns, and appropriateness of content and performance expectations for SWSCD,
- Be specific, succinct, and constructive, and
- Give actionable guidance for improving test items.

Accuracy Examples — Grade 4 Reading

R-4.1: Understand the meaning of words in passages that are read to the student or that the student reads.

Complexity continuum: The words could be shown with or without a graphic representation or could appear in a sentence.

It is Jabari's birthday today. He will get several presents.

What is another word for several?

many

easy

better

We usually go outside for recess.
When it rains, we stay inside.

What does the word usually mean in these sentences?

always

commonly

finally

Accuracy Examples — Grade 4 Reading

R-4.1: Understand the meaning of words in passages that are read to the student or that the student reads.

Complexity continuum: The words could be shown with or without a graphic representation or could appear in a sentence.

It is Jabari's birthday today. He will get several presents.

What is another word for several?

many

enough

better

lower

higher

We usually go outside for recess.
When it rains, we stay inside.

What does the word usually mean in these sentences?

always

commonly

quickly

Accuracy Rating: No = Inaccurate → incorrect answer is coded

Recommendation: Correct answer is “many”

Accuracy Rating: Yes = Accurate → all parts of the item are correct; clear and concise language

Bias & Accessibility

3. Is the item free of bias and any accessibility concerns? (e.g., for visually impaired (VI) students — avoids slang/colloquialisms — for protected groups of people) ☐ **Yes** ☐ **No**

Yes = Free of bias and accessibility concerns: All parts of the test item are **free of bias and accessibility concerns** (i.e., item is “spot on”, with **no improvements needed**).

No = Potential bias or accessibility concerns exist: Some part(s) of the test item are **potentially biased** for or against protected groups of people and/or **inaccessible** for students with specific disabilities (i.e., **some improvement is needed**).

Potential Concerns Around Bias & Accessibility

In fairness to all students, we want to avoid bias and accessibility issues that favor or disadvantage certain groups of students in comparison to others, including:

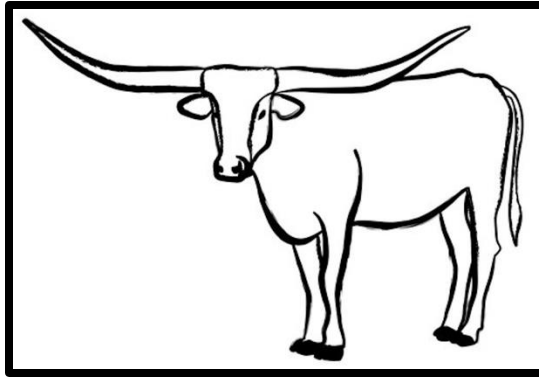

- Visual/auditory bias (options that look or sound too similar, distracting details, clutter/congestion, focus on very small features)
- Regional bias (language, topics, or concepts that are highly geographical and unfamiliar)
- Protected groups bias (sex/gender, race/ethnicity, national origin, age, disability, religion/faitth).

All parts of the test item should be examined for bias and accessibility issues.

Bias & Accessibility Example — Grade 8 Science

S-8.12: Recognize that living organisms need food to obtain energy and grow.

Complexity continuum: ...recognizing food is used for “energy” by living things to grow and survive.

Here is a longhorn.

What does the longhorn munch for energy?

trash

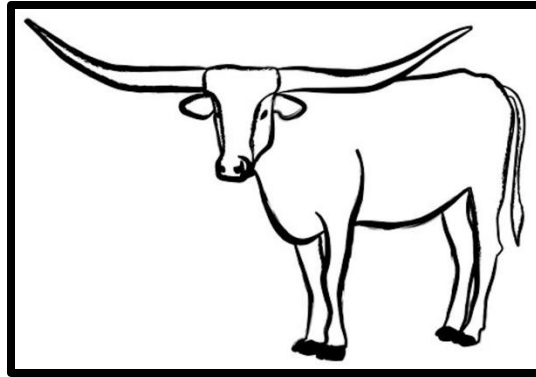

glass

grass

Bias & Accessibility Example — Grade 8 Science

S-8.12: Recognize that living organisms need food to obtain energy and grow.

Complexity continuum: ...recognizing food is used for “energy” by living things to grow and survive.

Here is a longhorn.

What does the longhorn munch for energy?

trash

glass

grass

Bias & Accessibility Rating: No = Bias and accessibility concerns → “longhorn” is regional slang; “munch” is colloquial, not scientific; answer options too similar in sound/structure; animal not common

Recommendation: change longhorn to cow and munch to eat; change glass to rocks; use more common cow

Accessibility, Appropriateness, & Accuracy of Graphics

4. If present, are graphics accessible, appropriate, and accurate? (e.g., consistent size, free of distracting/unnecessary details) ☐ **Yes** ☐ **No**

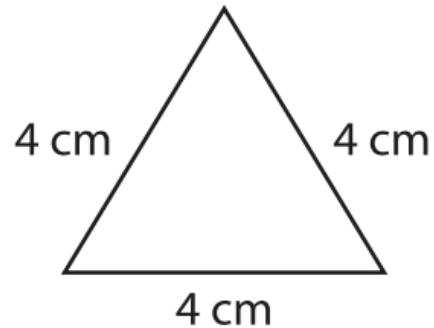

Yes = Graphics are free of concerns: All aspect of graphic(s) are **accessible**, **appropriate**, and **accurate** (i.e., item is “spot on”, with **no improvements needed**).

No = Graphics are not free of concerns: Some aspect of graphic(s) are **potentially inaccessible**, **inappropriate**, and/or **inaccurate** (i.e., **some improvement is needed**).

Accessibility, Appropriateness, & Accuracy of Graphics Examples — Grade 6 Math

M-6.9: Calculate the perimeter of triangles, squares, rectangles, and pentagons.

M-6.12: Interpret data in picture and bar graphs and line plots to identify values.

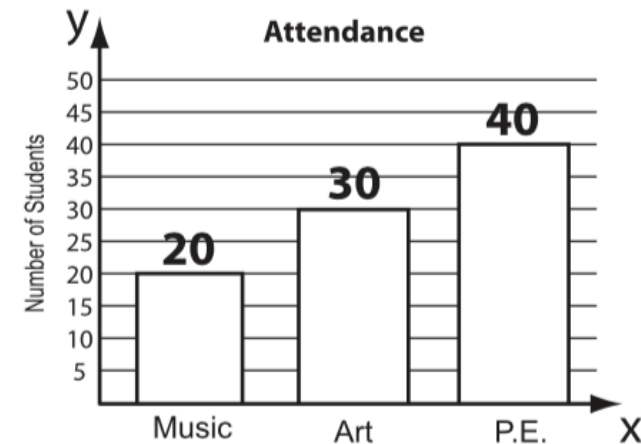

The perimeter is the distance around the outside of a figure.

What is the perimeter of this triangle?

4 cm

8 cm

12 cm

How many students attended Art class?

10

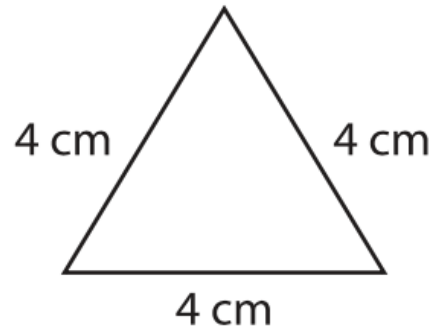

20

30

Accessibility, Appropriateness, & Accuracy of Graphics Examples — Grade 6 Math

M-6.9: Calculate the perimeter of triangles, squares, rectangles, and pentagons.

M-6.12: Interpret data in picture and bar graphs and line plots to identify values.

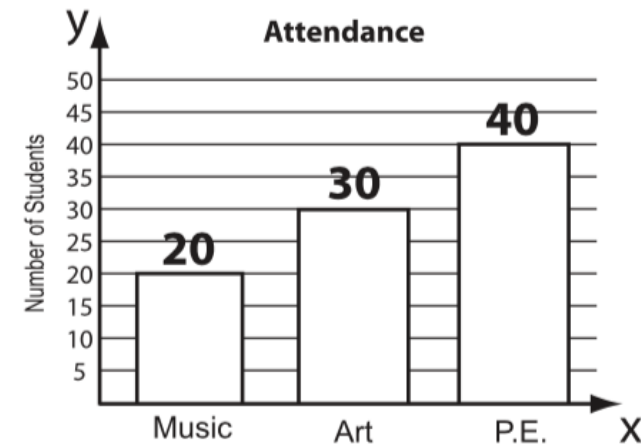

The perimeter is the distance around the outside of a figure.

What is the perimeter of this triangle?

4 cm

8 cm

12 cm

How many students attended Art class?

10

20

30

Rating: Yes = Accessible, Appropriate, Accurate
→ all parts of the item are clear and correct

Rating: No = Inaccessible/Inappropriate → horizontal lines distracting; y-axis busy; bar #s clue

Recommendation: Remove lines/bar #s; y-axis by 10s

Review Resources & Support Docs

Via your machine, you should have access to the following documents as PDF to support your review of field-test items:

- Cheat Sheet
- Webb's DOK
- Training Slides
- VESOL & Complexity Continuum
- Calculator

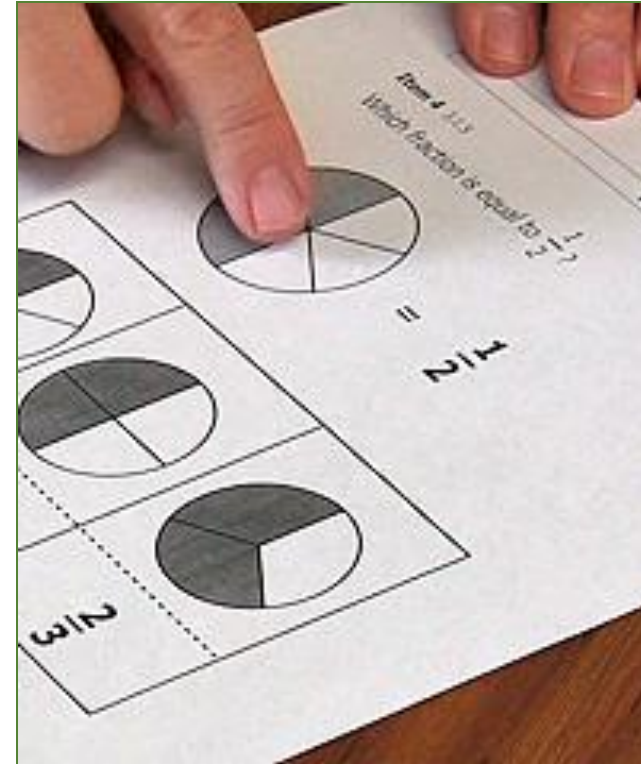

BREAK TIME & ROOM MOVE

Distributed Item Review (DIR) Review & Discussion Process

Distributed Item Review (DIR) System

Accessing and Confirming Review Assignments

4. Take a moment to organize your thoughts and resources to support your review judgments:

- Item Review Cheat Sheet
- Webb's Cognitive Processing Wheel
- VESOL & Complexity Continuum
- Training Slides

5. Begin reviewing items by clicking “Next”.

The screenshot displays a web interface for reviewing test items. On the left, a sidebar titled 'Items' contains a search bar labeled 'Filter Items' and a list of nine items, each with a red minus icon and a blue link. The items are: VA_RDG_03_FI_R-3.1_L251, VA_RDG_03_FI_R-3.4_L251, VA_RDG_03_FI_R-3.5_L251, VA_RDG_03_FI_R-3.7_L251, VA_RDG_03_FI_R-3.7_L252, VA_RDG_03_FI_R-3.7_M251, VA_RDG_03_FI_R-3.7_H251, VA_RDG_03_FI_R-3.7_H252, and VA_RDG_03_NF_R-3.1_L251. The main content area is titled 'Grade 3 Reading Teacher Committee Field Test Item Review'. It includes metadata: Subject: English Language Arts, Grade: Grades 3-8 and HS, Opening Date: 08/13/2024, Closing Date: 12/20/2024, and Number of Items: 18. Below this are sections for 'Resources' (No resources available for this review), 'Videos' (No videos available for this review), and 'Instructions' (Please rate the test items and test forms for quality based using review questions displayed. For any poorly-rated test item, please provide a recommendation on how the item (or form) needs revised in the comment box provided.). A blue 'Next »' button is located at the bottom right of the main content area.

Reviewing Test Items

1. Carefully review all aspects of item & associated VESOL and complexity continuum.
2. Consider the full SWSCD population.
3. Have resources ready (e.g., Slides).
4. Answer all 4 required questions.
5. If you answer “No” to any of 1-4, or have suggestions to improve an item, please concisely recommend actionable edits in textbox.
6. Click “**Save and Continue**” button to record responses.

Item list is clickable, and shows completed (✓) & not yet completed (●)

Review Questions

VESOL & complexity continuum

Save and Continue

Examiner text

Student-view of item; correct answer keyed

The screenshot displays the 'Grade 3 Reading FT Review - VA_RDG_03_NF_R-3.1_L251' interface. On the left, an 'Items' list shows various test items with status indicators (green dot for completed, pink dot for not yet completed). The main area is divided into several sections: 'Item Information / Scoring Protocol' with examiner text and a student-view image of an ant; 'Questions' with five review questions about item alignment, accuracy, bias, graphics, and suggestions; 'Standards' with relevant VA and SDBQ standards; and a 'Save and Continue' button at the bottom right. A red bracket on the right side groups the 'Examiner text', 'Student-view of item', and 'correct answer keyed' sections.

Resources

No resources for this review

Item Information / Scoring Protocol

Here are three words for you to read. (Point to each and pause for student to read the words.) The ant is small. Which word is ant: (Do not read answer choices.) A, B, or C?

Item

The ant is small.
Which word is ant?

fly ant arm

Questions

1. Is the item sufficiently aligned to the target VESOL?
☒ Yes
☐ No
2. Are all aspects of the item accurate? (e.g., correct answer coded — grammar, punctuation, spelling — clear and direct language — match between examiner/student materials, including graphics)
☒ Yes
☐ No
3. Is the item free of bias and any accessibility concerns? (e.g., for visually impaired (VI) students — avoids slang/colloquialisms — for protected groups of people)
☒ Yes
☐ No
4. If present, are graphics accessible, appropriate, and accurate? (e.g., consistent size, free of distracting/unnecessary details)
☒ Yes
☐ No
5. If you answered "No" to any of the above questions, or you have any suggestions to improve the item, please succinctly recommend any edits.

Standards

- VA_RDG_03_NF_R-3.1: Demonstrate comprehension of nonfiction texts and use word analysis strategies (NF)
Understand the meaning of words in passages that are read to the student or that the student reads.
The words could be shown with or without a graphic representation or could appear in a sentence.
- SDBQ: VR303

Save and Continue

Important Things to Do During Reviews

- Stop and start your review at anytime and any number of times – the DIR keeps track of what you’ve successfully completed and saved by giving you a green check (✓) next to the item ID (top-left of screen).
- Edit previously saved responses by clicking on the item ID — click “**Save and Continue**” to record changes.
- Self-monitor patterns of attentiveness and consistency in your responses.
- Budget and monitor your time — accuracy, quality, and timeliness of responses are important to a successful review.
- Feedback should be specific, succinct, constructive, and actionable.

Questions & Answers

Do you have any questions or comments to share before we move into independent review?

Looking Ahead: Whole-group Discussion of Review Ratings & Feedback

Whole-group Discussion Process

- Following independent review of small batches of assigned items in DIR, the committee will convene for discussion and voting on the test items.
- VDOE and BRT personnel will know participants are ready to review when everyone's name tent is draped over the top of their computer.
- Discussion of items will begin with a different member of the committee for each item to ensure all participants have the opportunity to lead the discussion.
 - VDOE and BRT will take notes of the discussion.
 - All committee members will vote on each item with a verbal “accept” or “accept with edits”.
 - This process will continue for all the assigned items.
- At the end of each day, VDOE and BRT will reconcile their notes on the test items.

Confidentiality & Non-Disclosure Agreement: Test Security Reminder

- As a reminder:
 - Do not discuss or share test content with others.
 - It is permissible to talk about the process you completed, but not the test content.
 - Any resources, including notes you may have taken, should be left in the room for BRT and VDOE staff to collect.
